

# --- Django User Admin Application Design Document ---

## 1. User:

- Interacts with the Django application.
- Provides basic profile information (First name, Surname, Email, Phone).

## 2. Django App:

- Receives user input.
- Manages profile data and actions.

## 3. Validation:

- Checks the correctness of the provided data:
  - Email address is in the correct format.
  - That duplicate email addresses and cell phone numbers cannot be entered.

## 4. Profile Actions (Get, Save, Update, Delete):

- **Get Profile:**  
Retrieves existing profile information based on user input.
- **Save Profile:**  
If validation passes, saves the profile data in the database.
- **Update Profile:**  
If validation passes, allows users to update existing profiles.
- **Delete Profile:**  
Gives users the option to delete their profiles.

## 5. Automation (Docker, GitHub Actions):

- **Docker:**  
Containerizes the Django application for portability.
- **GitHub Actions:**
  - Enables Continuous Integration/Continuous Deployment (CI/CD).
  - Triggers on code changes.
  - Builds Docker image.
  - Deploys the application.

## 6. Ubuntu Server:

- Hosts the Dockerized Django application.
- Accessed by users to interact with their profiles.
